

HAWKEYE

See the truth in every test !!

HAWKEYE
Malaria P1/Pan Ag
One step test for detection of Malaria P1/Pan Ag

- Contents:
- 1. Test devices individually foil-pouched with a desiccant X 50
 - 2. Specimen transfer Device X 1
 - 3. Assay Buffer X 1
 - 4. Instructions for Use X 1
 - 5. Alcohol Swab/Lancet X 50 (Optional)

For 1000 Specimens X 50
Mfg. in INDIA

Background

Florotek BioSystems

With years of expertise in malaria diagnostics—pioneering solutions based on parasite concentration and fluorescence microscopy—Florotek BioSystems has developed a deep understanding of malaria detection.

This strong foundation has helped us in developing the HawkEye™ Malaria Rapid Diagnostic Test Kits: a solution designed for healthcare providers who need quick, accurate, and dependable point-of-care diagnosis.

They All Look Similar, But They Don't Perform Alike

The malaria diagnostic segment is flooded with numerous rapid test formats.

At first glance, many appear almost identical, making it difficult for clinicians and procurement officers to decide which one to choose.

The truth is, many manufacturers compromise on specifications to offer low-priced kits.

To cut costs, they:

- Use substandard or low-concentration reagent formulations, which weakens antigen detection.
- Employ cheaper, low-grade membranes, leading to poor flow rates, faint lines, and inconsistent results.
- Follow non-automated, manual manufacturing processes, resulting in high variability and lack of batch-to-batch consistency.

Such practices may make a kit look affordable on paper, but they deliver a substandard diagnostic tool in practice—unreliable, error-prone, and risky for patient care.

Presenting HawkEye™ Malaria Rapid Diagnostic Test Kit

Just as the hawk identifies and captures its prey with unmatched sharpness and focus,

HawkEye™ RDT captures malaria antigens with unrivalled precision and sensitivity.

HawkEye™ RDT is engineered to outperform—not just compete on price.

Premium Membrane Assemblies

Ensure crisp, sharp bands, smooth liquid flow, and consistent test performance.

In-House Reagent Manufacturing

Unlike many kit assemblers, we manufacture our reagents in-house, guaranteeing high concentration, purity, and stability leading to higher sensitivity and lower false results.

Automated, Controlled Manufacturing

Each step is standardized and validated, ensuring uniform quality across every batch delivered.

The result?

A rapid test kit that isn't just another strip in the box, but a clinically reliable diagnostic tool, trusted by healthcare professionals.

Engineered for Precision & Sensitivity

Tested & Approved by ICMR

Built for both clinical and field conditions

Consistency that substandard kits cannot deliver
